

Dr Shane Battye Testimonial

Grant-in-Aid 2017

Testimonial

The RCPA Foundation Research Grant-In-Aid provided us with a high performance computer, able to crunch the complex algorithms required for real-time image stitching from a microscope, as well as a development microscope and camera for field testing. Having this hardware accelerated our research and led to two published papers that utilised images obtained with from this work, with a third in progress and many more we expect to follow.
