

Who are we?

Virtus Diagnostics & Virtus Genetics are members of Virtus Health. We are an Australian owned and publicly listed company and one of the most successful medical collaborations of its kind globally. Our heritage is in assisted reproductive services as the leading facility treatment provider in Australia and Ireland with a growing presence in Singapore and Denmark. Virtus Health has grown through diversification and today has a network of general and specialised laboratories, day hospitals and fertility clinics operating throughout Australia, Europe and South East Asia.

Virtus Diagnostics has state-of-the-art pathology and genetic laboratories. Our General Pathology operates throughout New South Wales, Queensland, Victoria, and the ACT. Our main Genetics laboratory (Molecular and Cytogenetics) is located in Brisbane and IVF PGD in Melbourne. All our laboratories are NATA accredited and offer a large spectrum of pathology and genetic testing services.

Genetics is an important part of our core business, and an exciting part of our future. Virtus Genetics was recently launched to focus on future Research and Development, Genetic advancement and to establish ourselves as world leaders.

We are searching for a full time **Genetic Pathologist** to join our innovative and experienced team.

Who are you?

You are skilled at building relationships and are a trusted advisor to your colleagues. You are meticulous, organised and have great leadership qualities. You work harmoniously with a high level of initiative in a complex team environment, and you communicate effectively to build good relationships with clinicians and stakeholders. You manage time effectively and prioritise your workload. You are committed to principles of clinical quality management. You want to be part of the growth of a business and want to make a difference. You share our company's vision, culture and values.

Imagine if we got together

Our Genetic Pathologist will drive our genetic services in reproductive health and lead the expansion into other areas of genetic testing and research. We share a common vision and work towards becoming a world class genetics laboratory.

Essential Qualifications

- Registered with the Australian Health Practitioner Regulation Agency (AHPRA)
- Fellowship (FRCPA) of the Royal College of Pathologists of Australia, with scope of practice in Genetics
- Experience and expertise in genomics
- Experience in microarrays and exome sequencing
- Demonstrated commitment to the principles of clinical quality management, continuous improvement and a knowledge of National pathology Advisory Council (NPAAC) Standards and NATA accreditation processes

Key Responsibilities

- Supervise all genetic laboratories in accordance to NPAAC guidelines
- Lead an innovative and experienced team
- Develop new and expand ongoing genetic testing
- Oversee clinical quality management systems
- Identify and escalate system weaknesses through system monitoring activities
- Conduct internal education programs and compliance activities
- Developing new services to align with business expansion
- Development and implementation of risk management processes

Our Culture

We are a team with clear purpose; we work together to continuously improve the services we provide. Patient care, scientific and clinical leadership and a passion for making a difference is always at the

forefront of our minds. Collaboration, agility and the curiosity to investigate new ideas is how we will continue to grow.
